

TECHNICAL DATA SHEET - VÄGG- & VALVKLOSS ALLROUND

DESCRIPTION

Vägg- & valvkloss allround is a PVC-free reinforcement spacer designed to ensure the correct distance between reinforcement and formwork when casting slabs and walls. It is nailable and has a small contact surface against the formwork, minimizing marks in the concrete. The spacer provides excellent concrete encapsulation and features two cover thicknesses per spacer.

For easy installation, it is equipped with clear height markings and can be pre-mounted at reinforcement intersections. Its concrete-gray color and slightly rounded feet make the spacer nearly invisible in the finished concrete surface.

TECHNICAL INFORMATION

Color: Grey

Material: PVC-free PE (Polyethylene)

Concrete cover: 15-55 mm (stock assortment in table below)

Rebar Ø: 4-20 mm
