

TECHNICAL DATA SHEET - VALVDISTANS SPEEDIES®

DESCRIPTION

Valvdistans Speedies® is a reinforcement spacer designed for positioning reinforcement mesh on slab formwork or other hard and even surfaces. Valvdistans Speedies® features integrated locking pins that secure its position, preventing movement during concrete pouring. These pins are approximately 10 mm high and are durable enough to withstand foot traffic.

Additionally, Valvdistans Speedies® is equipped with narrow, pointed grey "feet," ensuring minimal contact with the surface. This design significantly reduces visibility in the finished concrete surface after formwork removal.

Using Speedies® is significantly more ergonomic compared to traditional spacers, especially when combined with the Släppkäpp tool. Additionally, Speedies® can provide time savings up to 95%! Speedies® is designed for optimal use with reinforcement mesh. Its size exceeds the mesh openings of reinforcement grids with 150 mm c/c spacing, ensuring functionality regardless of placement.

TECHNICAL INFORMATION

Color: Grey

Material: A blend of PVC-free PP and PE (Polyolefin blend)

Concrete cover: 20-50 mm

Material consumption: 1-1,5 pcs/m²
